Report Date 01/27/22 3:47 am
Received Date 01/25/22 8:05 pm
Request Date 01/25/22 8:09 pm
Study Date 01/25/22
Report # 2187808

Patient Ransom, BLOOMINGTREE KASHMERE DUST
Sex Female **Age** 1y 3.00m **Weight** 10.00 lbs.
Study Plain Film/X-Ray: Pelvis, Hip Right, Hip Left
History WANTS HIPS EXAMINED

Owner April **Patient ID** 36236
Species Feline **Breed** Maine Coon
Req. Type Routine

Findings

2 radiographic images of the pelvis are available for evaluation. The pelvis is symmetric. The hips are mildly incongruent with less than 50% coverage of the femoral heads by the acetabulum however the femoral heads are normal in shape and margination. There is no evidence of osteolysis. The muscle mass to the pelvic limbs is symmetric. The patella is normal in position bilaterally. The articular surfaces of both stifle joints are smooth with no stifle joint effusion. The visible lumbar spine is normal.

Conclusions

Mild hip incongruity with no secondary degenerative changes. The remainder of the pelvis and pelvic limbs is normal.

If you would like additional information regarding specific treatment recommendations for this case please submit an additional request for an internal medicine consultation. Please make sure you apply the same patient identification number to the request.
